ENABLING A MOBILE WORKFORCE

ARE YOU READY FOR THE HYBRID WORKPLACE?

79% of employees choose iOS as their mobile device operating system of choice — Jamf

Adjusting to the newly hybrid approach to the workplace (mixing both at home and in the office), employees require on-the-go devices to continue working efficiently. Managing these devices, while also ensuring that your employees remain connected when and where they need to be on each of these devices, will play a key role in the success of your hybrid transition.

MOBILITY IN THE WORKPLACE

Reliable devices that can go wherever your employees go

- iPad®
- iPhone®
- Apple Watch®

Connective technology to make teamwork easy

- Cloud solutions—mobile-optimized platforms for collaboration and access to apps and data
- Available 5G and Wi-Fi 6 technology on many devices—faster speeds and lower latency

Anywhere support available when your employees need it most—24/7/365

- **Residential support**
  for at-home employees

- **Onsite support**
  for employees at the office

- **Remote support**
  for employees at home and in the office

78%

of millennials believe that having access to the technology they like at work makes them more effective in their job.

— PwC

MOBILITY WITHOUT THE COMPLEXITY

The transition to empowering your mobile employees can be challenging. The complexities range from managing the deployment of new devices and adopting new Bring Your Own Device (BYOD) policies to ensuring the right connective technologies are in place and your users are accurately supported.
We can make it simple.

As a single-source provider, we handle the procurement, deployment, management, and support of your devices, including your Apple® products, to meet your specific business requirements and the unique needs of your mobile end users.

What we can do for you

- Work with you to acquire, provision, and support smartphones, tablets, and other mobile devices to get your users what they need

- Help you stay current with technology and get the most out of your investment with device trade-in

- Manage your mobility services and integrations so that your employees can maintain uninterrupted anytime, anywhere, and any device access

- Enable communications with mobile office workers and allows them to interact with resources that have traditionally been only accessible for PC users, such as databases, business email and other corporate content. To do so, a Multimedia Messaging Service (MMS) server delivers the interpreted content to specialized mobile apps

We do it all, so you don't have to

We cover the implementation, management, and support of a wide range of devices, including Apple products. Enable work at any time and from anywhere with unparalleled visibility into the asset lifecycle and the integration of services from purchase through disposal (ITAD). Through cloud-based management of desktops, laptops, and mobile devices, both corporate and BYOD, we'll work with you to optimize costs, ease your IT workloads, and improve your end-user experience.
